Why Choose the Omnivore Composter?

- Increase Bio Security on your Farm.
- No deadstock is accessible for scavengers that could transmit disease to your livestock.
- Cost of electricity to run the Omnivore Composter is comparable to running freezers for deadstock.
- 120 Volts or optional solar package to power an Omnivore Composter.
- Easy to adjust time clock for ideal manageable composting process.
- Weight of composting drum is 100% supported by support rollers.
- Spring loaded, self latching loading door for easy loading.
- Discharge door that works as slide when discharging.
- The Poly Urethane Insulated drum ensures that weather has a minimal effect on the composting process and that the heat generated stays in the Omnivore Composter.
- The Omnivore Composter is manufactured in Canada.
- Omnivore composting is easy to control and adjust, resulting in faster and more consistent end product.
- The Omnivore Composter creates its own heat during the composting process.
- NO FOSSIL FUELS NEEDED
