# Why Choose the Omnivore Composter

- Increase Bio Security on your Farm.
- No deadstock is accessible for scavengers that could transmit disease to your livestock.
- The Omnivore composter is manufactured in Ontario.
- Cost of Hydro to run the Omnivore composter is comparable to running freezers for deadstock.
- The Omnivore Composter comes equipped with a Variable Frequency Drive that ensures a slow start up (Soft Start), to eliminate excessive wear of drive parts.
- Variable speed motor for ideal manageable composting process.
- Weight of composting drum is 100% supported by support rollers.
- Easy to open receiving hopper is accessible at all times during the composting cycle, even while drum is rotating or choose the model with loading doors for easy loading with a front-end-loader.
  - Greaseable discharge door that works as slide when discharging.
  - The Poly Urethane Insulated drum ensures that weather has a minimal effect on the composting process and that the heat generated stays in the omnivore composter making sure that the composting process is successful.
  - Omnivore composting is easy to control and adjust, resulting in faster and more consistent end product.
