

FARROWING PRODUCTS

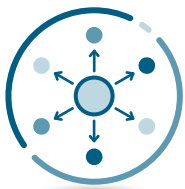

Innovative solutions for the
rigorous demands of your barn

Integra Crate

Canarm's Integra crate combines maximum versatility with increased sow comfort and productivity.

Standards are changing rapidly and we have been adapting and improving on our products for over 80 years to meet the needs of sow and piglet producers. We've made our crate easy to order and offer a variety of configurations to adapt to your building.

Versatile

The Canarm Integra crate can be configured and adjusted in multiple ways to get the most out of every square foot of space available and to adapt as your needs change.

- Variety of configurations including conventional and Euro style.
- Adjustable side bumper option.
- Custom crate designs.

Innovative

We care about your animals, and your barn's success. Our design choices are calculated decisions to keep your pigs safe and comfortable while keeping value and productivity high.

- Easy to clean quick release feeder.
- Optimal finger bar height provides appropriate access during feeding.
- Anti-crush bar for increased survival rate.
- Domed finger design for piglet and sow safety.
- Simple bolt together design for easy installation and maintenance.

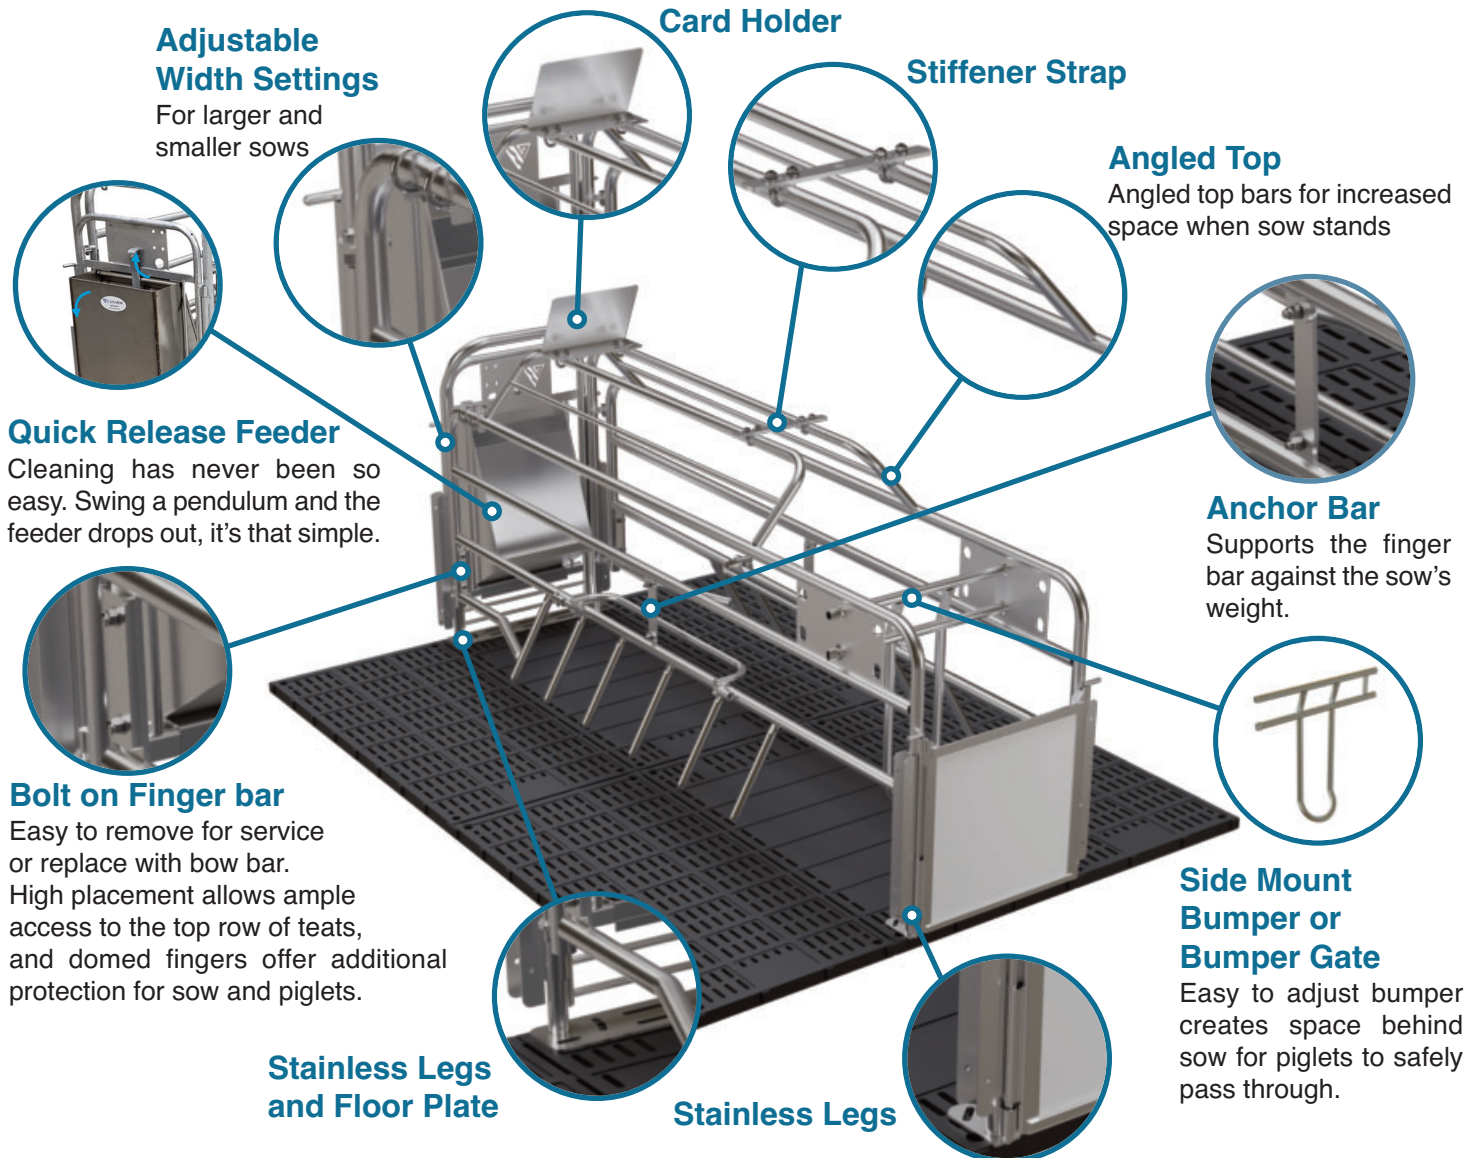

Quality

We use the best materials for our products to ensure a long life span with minimal maintenance. The combination of both a long life and versatility of the Canarm Integra crate means that our crate can be reused in a new barn build, even if your layout changes.

- Stainless steel feet and legs
- Galvanized frame

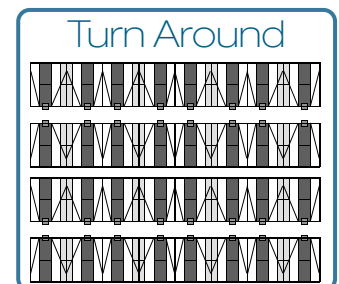

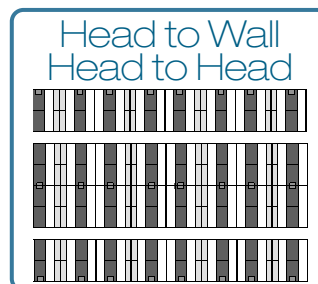

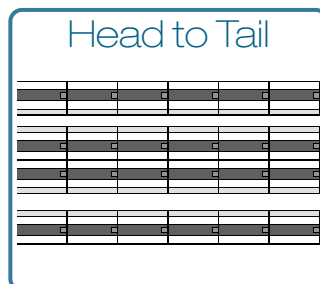

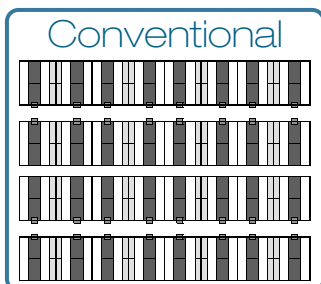

Created for versatility.

Our Integra crate can be configured in a multitude of ways to provide the perfect crate for your barn.

The perfect fit for your barn layout.

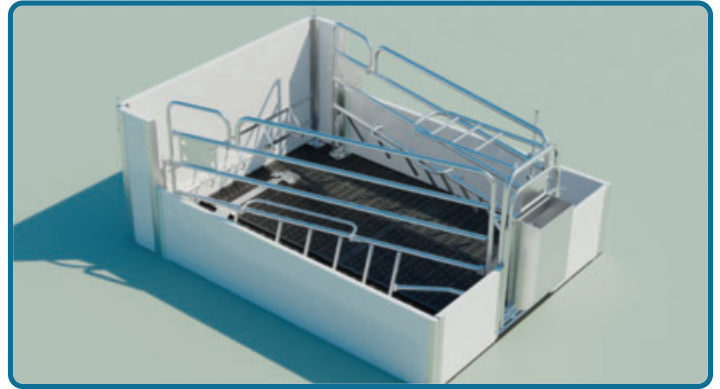

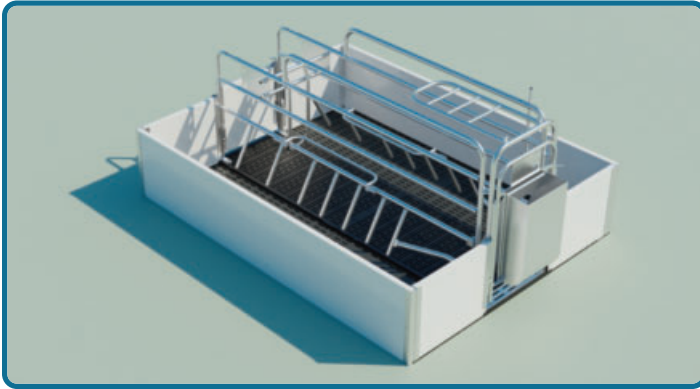

Whatever layout you have, the Canarm Integra crate is the perfect choice. The Integra crate can be easily converted to any layout required by using removable and interchangeable components.

Turn-around crate.

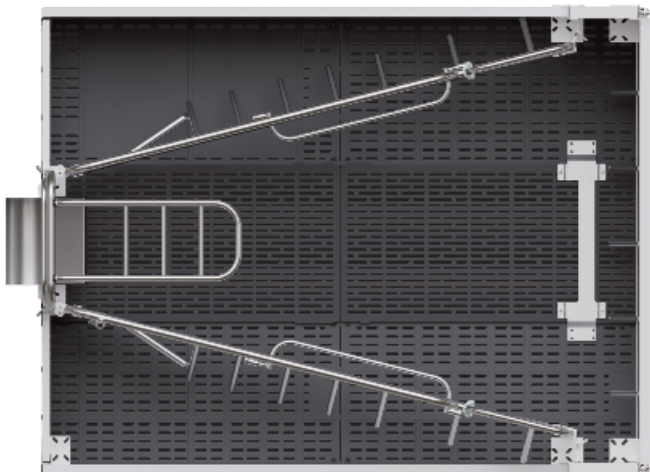

Convert from Conventional to Turn-Around without replacing the majority of your crate.

When converting a Canarm Integra crate from conventional to a Turn-Around crate; simply remove the back gate and allow the sides out of the foot plate and install the necessary posts, plank, and foot plates to prevent the sow from exiting the pen.

Turn-around crate.

Lock the sow up during sensitive times during farrowing/lactation, and then open the crate up to provide the sow with the stimulating freedom to turn around.

Farrowing Floor

The Integra floor system is the perfect choice when looking for durability and comfort. The heavy duty Integra floor has been designed for everyday sow traffic, and is backed by a 15 year warranty.

The 4-bolt installation, ensures installation and service can be done by any staff or farm employee.

15 Year Warranty

Our flooring is strong, durable and built to last. We are confident in the durability of the Integra floor and back that up with a 15 year warranty.

Flame Resistant

The Integra Farrowing Floor has been given a Class A Flame Resistance rating. Constructed of compressed fiberglass, the Integra floor will dramatically slow the spread of fire if one were to break out.

Integrated Heating & Cooling

Keep your animals comfortable with our temperature controlled flooring option. Water is routed through the floor to heat or cool without the use of electrical components. When sows are at their ideal temperature, they will eat more, which increases weaning weight.

Quality Design

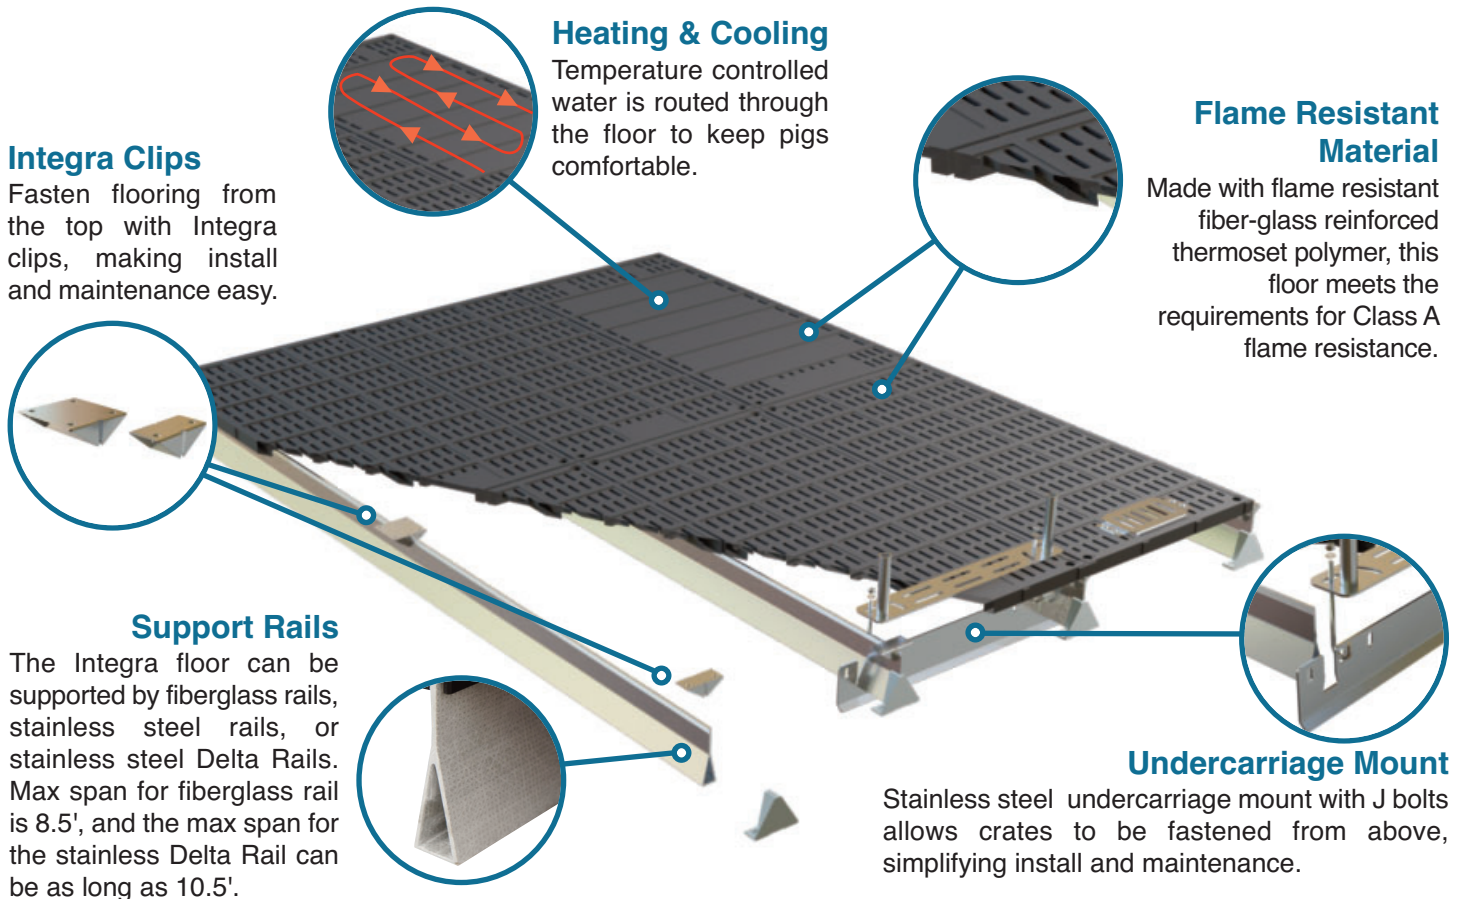

Designed for longevity and ease of use. The Integra floor can be installed and removed from the top making maintenance quick and easy. Quality construction makes the floor strong enough to handle the sows weight, yet gentle on their skin.

- Easy installation & maintenance
- Excellent traction
- Non-corrosive compressed fiberglass
- Easy to clean

Farrowing Flooring

Designed for longevity and ease of use.

The Integra flooring system has many features that make your life easier and help increase your profitability.

Integrated heating and cooling.

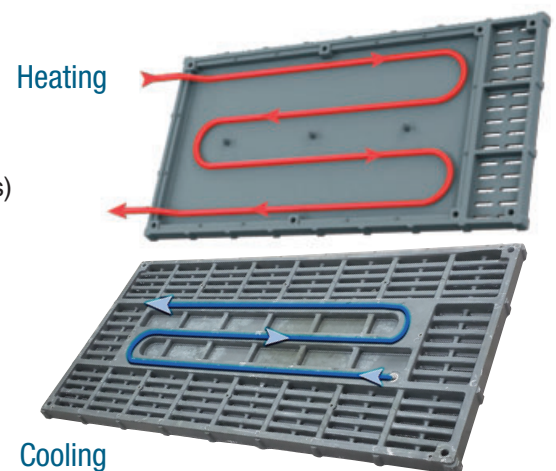

A comfortable, happy pig is a productive pig. The Integra heating and cooling pad has an integrated stainless steel pipe for warm or cold water to be pumped through. The water channel does not add any extra height to the floor, allowing it to lay flush with the surrounding Integra floor pieces.

Benefits of water heating

- When compared to electric heat pads:
 - More reliable.
 - No electrical components to fail.
 - No external wires
- Strong structural stability to handle sow's weight (for turn-around applications)
- Keep piglets warm at source.

Benefits of water cooling

- Higher sow feed intake:
 - Increase milk production.
 - Higher weaning weight.
 - Sows leave the crates in better physical condition.
- Sows spend more time nursing.
- Reduce respiration rate.
- Keep sows cool when temperatures are too high.

Integra sizing options.

Heavy Duty

Designed for everyday sow traffic.

42" — 48"

Note:

Heat and cooling options
are only available in 24" x 48"

Cast iron flooring.

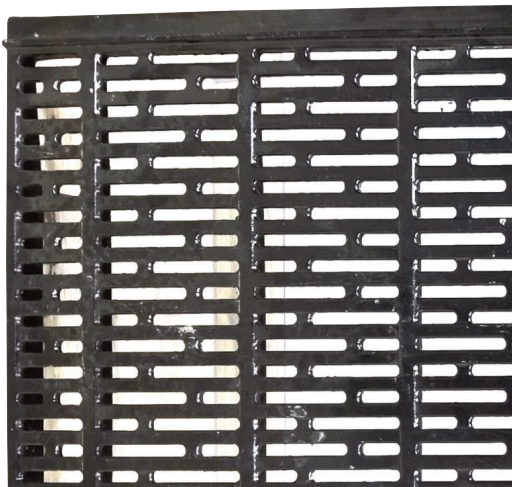

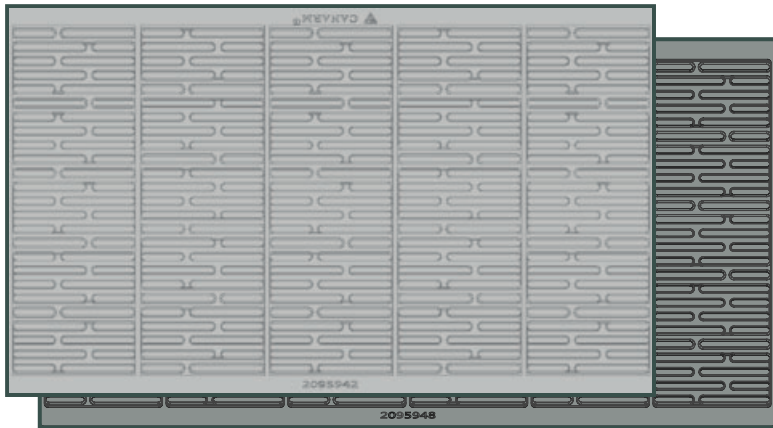

Constructed of black ductile cast iron for superior durability, Canarm's cast flooring provides excellent traction which reduces sows slipping and prevents crushing.

The cool touch of the cast iron under the sow helps keep her comfortable in hot weather, and is just cool enough to discourage piglets from sleeping close to the sow.

Holes on the end of the flooring allow floor pieces to be bolted together preventing them from separating.

Lift Crate

NEW

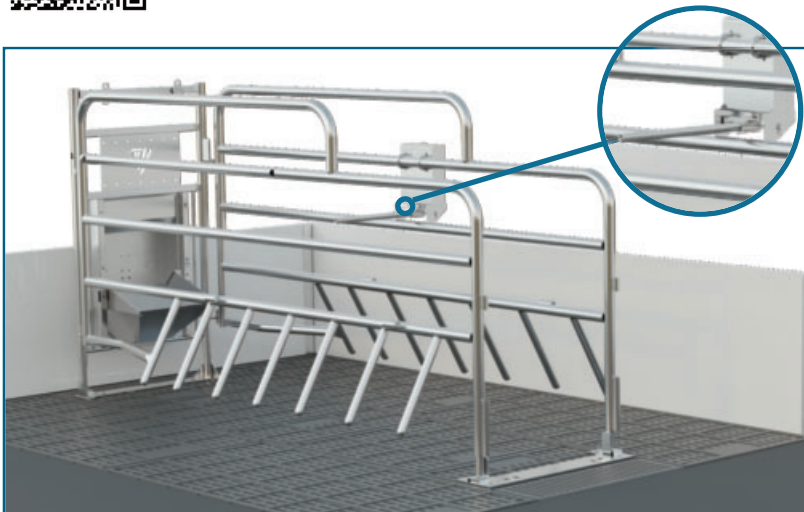

Take Production Levels to NEW HEIGHTS!

- Reduce piglet crushing.
- Wean more pigs.
- Save time.
- Increase profitability.

Pair with the Integra floor system to give you exceptional stability, premium traction and tremendous durability.

Scan to see lift crate in action!

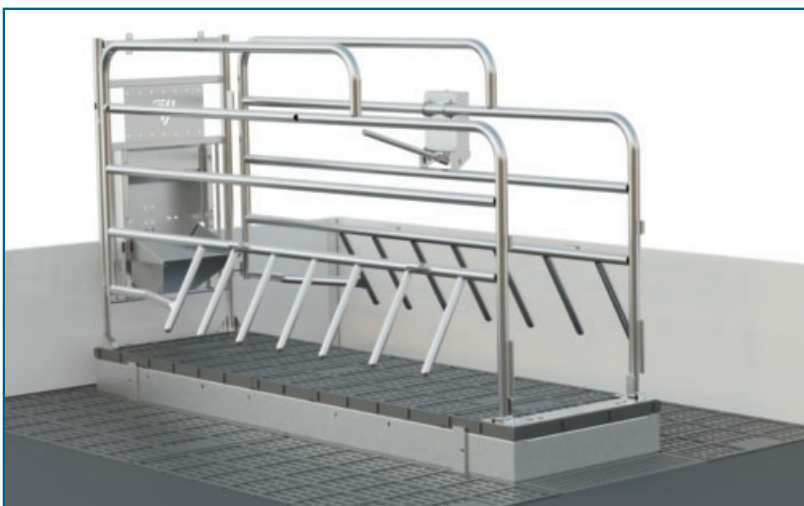

Down position.

When sow stands, her back lifts the activation spring, raises the crate and prevents piglets from going under the sow.

Auto Up-Down

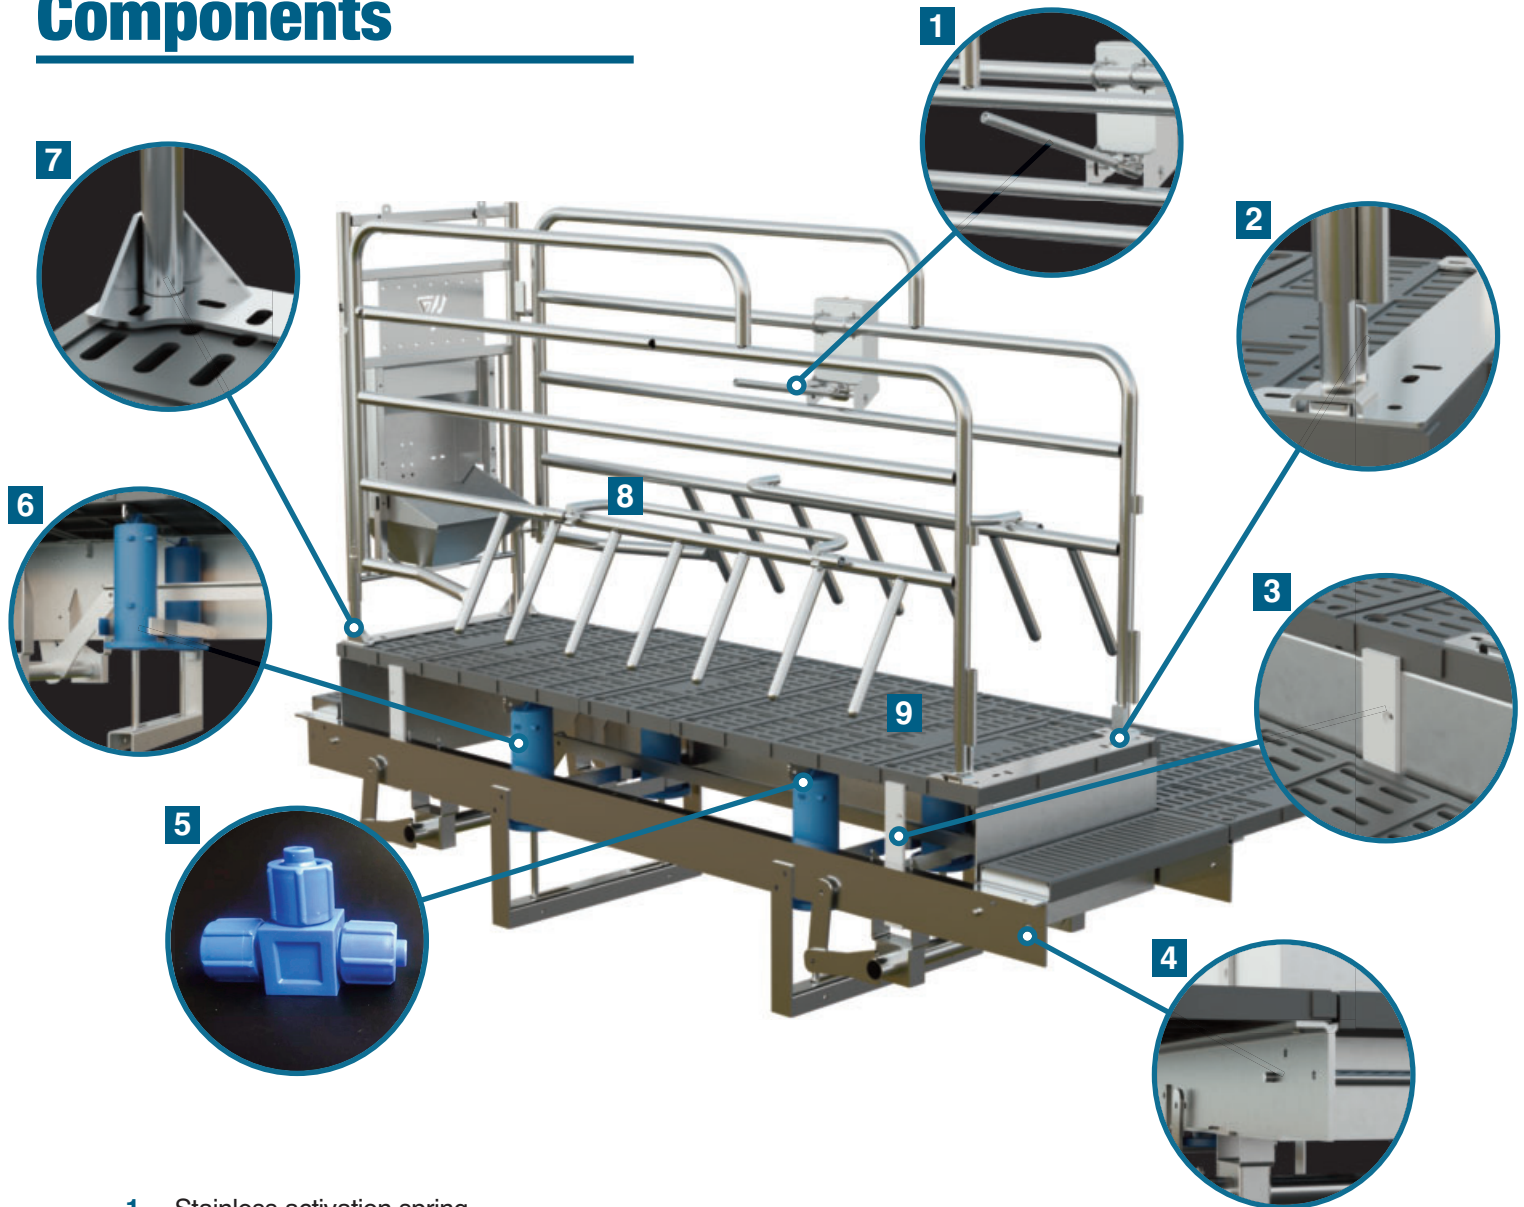

The Canarm Lift crate has 4 air cylinders operated by a control switch mounted in the hall way (1 per row). The control can be set to up, down or auto. Auto will raise in individual crates when the activation spring is triggered.

Raised position.

Once in the raised position, the piglets can't get under the sow, which reduces the possibility of crushing. When the sow lays back down, her back no longer lifts the activation spring and the crate slowly lowers to allow for nursing.

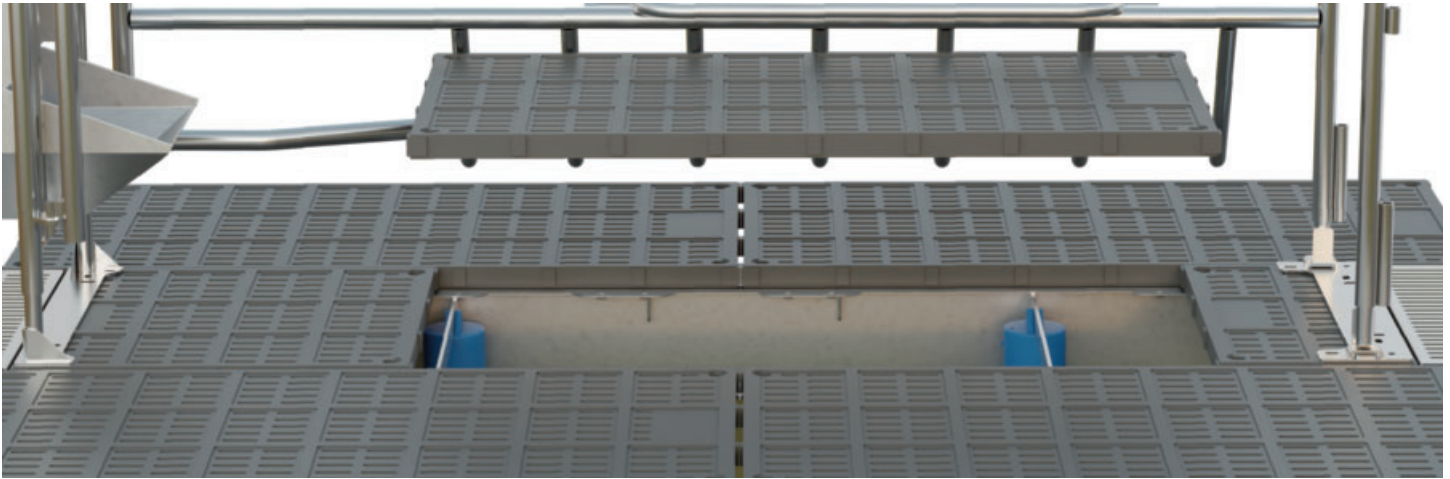

Components

1. Stainless activation spring.
2. Stainless steel legs & foot plates at front and back.
3. PVC glider strips on side of lift box minimizes wear and tear.
4. Super heavy duty galvanized support rails.
5. All pneumatic fittings under the crate, are compression fittings, not push-in fittings, ensuring no air leakage.
6. PVC cylinders & stainless steel shafts.
7. Heavy duty gussets on front arch.
8. Anti-crush bars.
9. Built-in service panels.

Servicing made easy.

With built-in service panels, the pneumatic serviceability has never been easier. Simply remove the Integra floor piece with 4 bolts, lift the floor out, and you'll have easy access to the pertinent equipment. The crate itself does not need to be removed.

High quality lift system.

The Canarm Lift Crate has 4 air cylinders operated by a control switch mounted in the hall way (1 per row). The control can be set to up, down or auto. Auto will raise in individual crates when the activation spring is triggered.

All our cylinders are made of the highest quality PVC, and have heavy duty stainless steel shafts for corrosion resistance. If one of the cylinders malfunctions or breaks, the lift system will still operate.

To increase confidence in a leak-free system, all pneumatic fittings under the crate, or in concealed areas are compression fittings (NOT push-in fittings).

4 PVC glider strips are provided to prevent wear and tear on the galvanized lift box during operation.
